

Potential Title: UI / UX Designer

Company Profile: Optigo Networks is shaping the future of the commercial Internet of Things (IoT) by redefining how smart buildings are connected. Optigo Networks reduces the cost and complexity of deploying IoT by providing a robust edge to cloud solution for connecting and monitoring the systems that make buildings secure, comfortable and efficient.

Optigo Networks' products consist of Connect™ a network platform that can be used to connect and manage IP devices, and Visual BACnet™ / InSight™, cloud-based monitoring solutions that leverage machine learning to enhance the integrity of building systems. Optigo is working with the largest building solutions providers in the world to bring new and innovative solutions to market.

The Role: Optigo is entering a new growth phase as we build the team that will deliver our next generation of products. We are seeking a full-time **UI/UX Designer** to join the talented team that was recognized as the 2015 Most Promising Startup in BC and in 2017 continues to shake up the industry. In this engaging position, you will be responsible for the user experience, look and feel of Optigo's next generation products.

Help us make an impact on the rapidly evolving world of smart buildings. Learn more at www.optigo.net.

Key Duties and Responsibilities:

- Develop robust user interface designs for Optigo's next generation products
- Understand the use-case and flows for Optigo products and translate that into exceptional customer experiences
- Enhanced the usability of existing Optigo products
- Take responsibility for the look and feel of Optigo's software products
- Interpret customer feedback to optimize software workflows and improve the customer experience
- Prepare user stories, sketches, wireframes, and prototypes
- Create deliverables including assets, specs, and style guides
- Present design decisions clearly to team and drive the focus on user-centric design
- Create branding and marketing-related visuals

Skills and Qualifications:

- Degree in a design-related discipline (digital media, interaction arts/design, etc.)
- 3-5 years of experience in creating interactive and scalable front-end web applications (SaaS/mobile)
- Mastery of HTML5, CSS3, and JavaScript (Portfolio required with the application)
- Proficient with Adobe Creative Suite
- Be able to work independently with the focus on delivering value rather than building perfect solution
- Strong verbal and written communication skills, including presentation skills for management team
- Capable of ramping up quickly and a willingness to learn in a startup environment
- Proven ability to multi-task, prioritize, and manage time effectively working in a collaborative team or individual environment

Additional Desired Skills:

- Exposure to source control tools like Git, Bitbucket
- Familiar with tools like Basalmiq, Mockingbird, HotGloo etc for creating mockups and wireframes
- Experience with AWS services and distributed applications
- Passion for new technologies and a desire to take ownership
- Highly motivated individual with boundless energy and enthusiasm

Benefits: Optigo Networks provides a competitive compensation package that includes stock options, benefits, educational opportunities, and the ability to work with the latest technologies in a fun, agile, startup work environment.
